

DO YOU HAVE DIABETES?

Are You Experiencing Numbness, Tingling, and Burning Sensations In Your Feet?

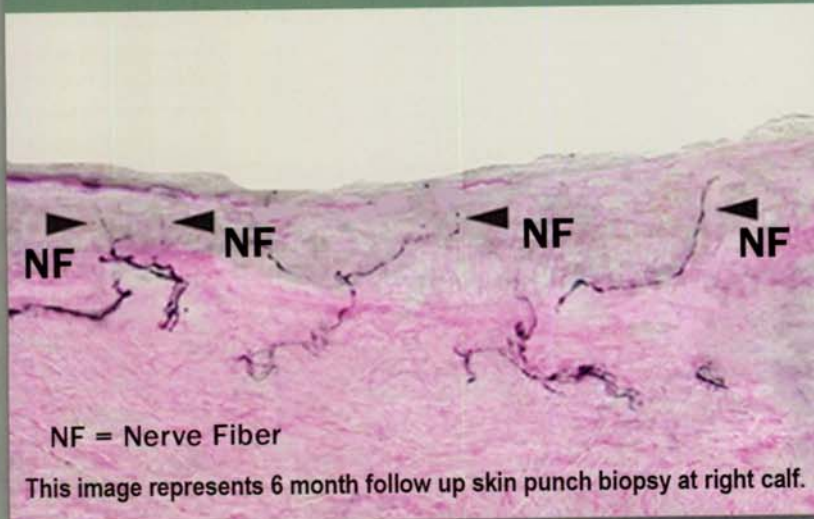

The Majority of Diabetes Patients With Neuropathy Have Reduced Nerve Fibers.¹

Decreased Nerve Fiber Density

Nutritional Management of Endothelial Dysfunction With Metanx[®] Increases Nerve Fiber Density.²

Increased Nerve Fiber Density

In a clinical study, one tablet 2.8mg L-methylfolate, 25mg P-5-P, 2mg Me-Cbl (Metanx[®]) twice daily has been shown to increase intraepidermal nerve fiber density by 97% compared to baseline after 6 months.²

Metanx[®] is an orally administered prescription medical food for the dietary management of endothelial dysfunction in patients with diabetic peripheral neuropathy.
